

EXERCISES ABOUT OS INSTALLATIONS:

INDEX

1.-

First of all, it is necessary to install Windows 10 in our computer (64 bits, or 32 if you do not have enough RAM memory in your physical computer) inside the virtual machine choosing an empty virtual machine and after that, configure some settings:

1.- At the top of the screen there are two menus and you can choose between two options to create a new virtual machine from the left side of the screen: **a) Menu-> click “Machine -> New”** or from the right side of the screen: **b) click “New icon”**  :

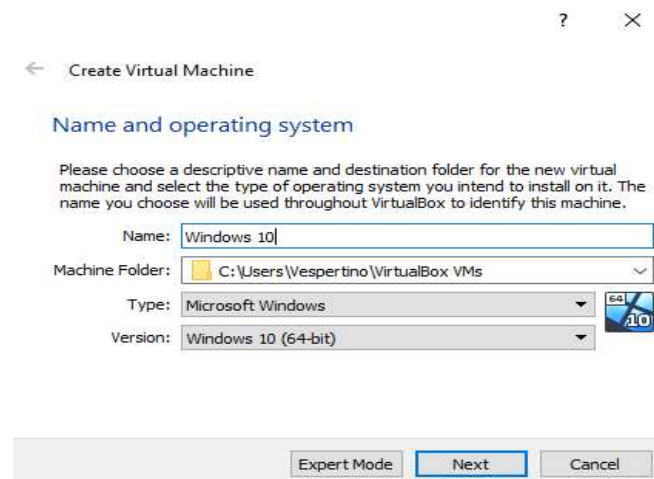

a)

b)

Then you select the Operating System (OS) following these steps: write the Name, choose the Machine Folder (in this example we show the default folder), OS Type and the corresponding SO Version clicking on the arrow inside each label. Then click “Next” button:

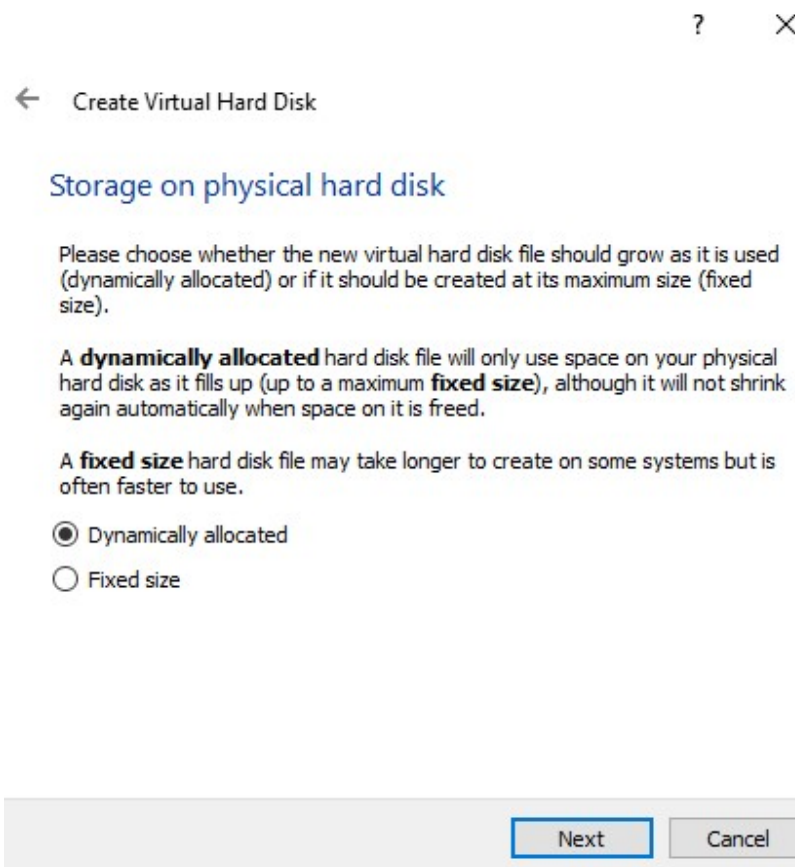

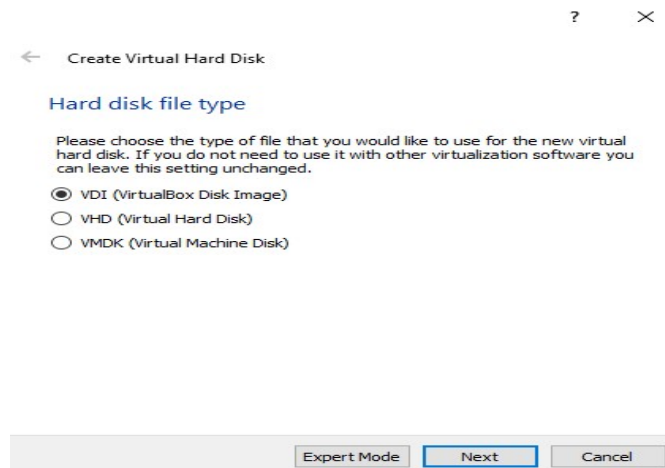

2.- This screen shows the RAM memory size that it can be chosen. By default, we see the recommended memory size and that is the one we need. Then [click “Next”](#) button:

The screenshot shows the 'Create Virtual Machine' dialog box with the 'Memory size' step selected. The title bar includes a question mark and a close button. The main heading is 'Memory size'. Below it, the text reads: 'Select the amount of memory (RAM) in megabytes to be allocated to the virtual machine.' and 'The recommended memory size is **2048 MB**.' A horizontal slider is shown with a blue arrow pointing to the recommended value of 2048 MB. The slider ranges from 4 MB to 8192 MB. To the right of the slider is a text box containing '2048' and 'MB'. At the bottom, there are 'Next' and 'Cancel' buttons.

Next step is to create a virtual hard disk because we do not have any. We want to choose 50,00 GB that is the recommended size of the hard disk. Then [click “Create”](#) button:

The screenshot shows the 'Create Virtual Machine' dialog box with the 'Hard disk' step selected. The title bar includes a question mark and a close button. The main heading is 'Hard disk'. Below it, the text reads: 'If you wish you can add a virtual hard disk to the new machine. You can either create a new hard disk file or select one from the list or from another location using the folder icon.' and 'If you need a more complex storage set-up you can skip this step and make the changes to the machine settings once the machine is created.' and 'The recommended size of the hard disk is **50,00 GB**.' There are three radio button options: 'Do not add a virtual hard disk', 'Create a virtual hard disk now' (which is selected), and 'Use an existing virtual hard disk file'. Below the options is a dropdown menu showing 'Windows 10 System Class.vdi (Normal, 50,00 GB)' with a folder icon to its right. At the bottom, there are 'Create' and 'Cancel' buttons.

After that, we need to create an **image of the virtual hard disk** virtual machine (VDI). Then [click “Next”](#) button:

File location and size

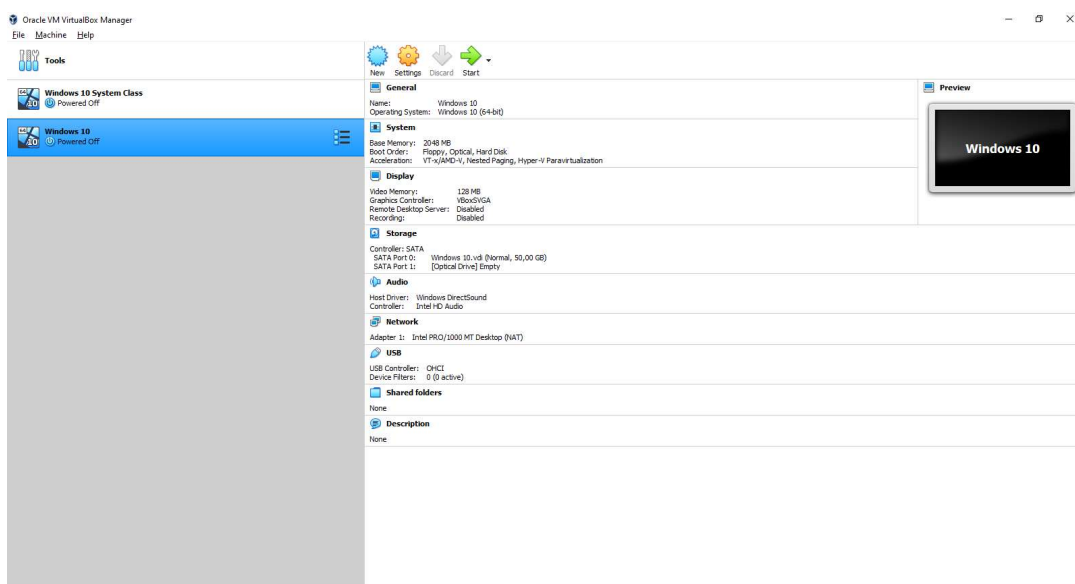

Please type the name of the new virtual hard disk file into the box below or click on the folder icon to select a different folder to create the file in.

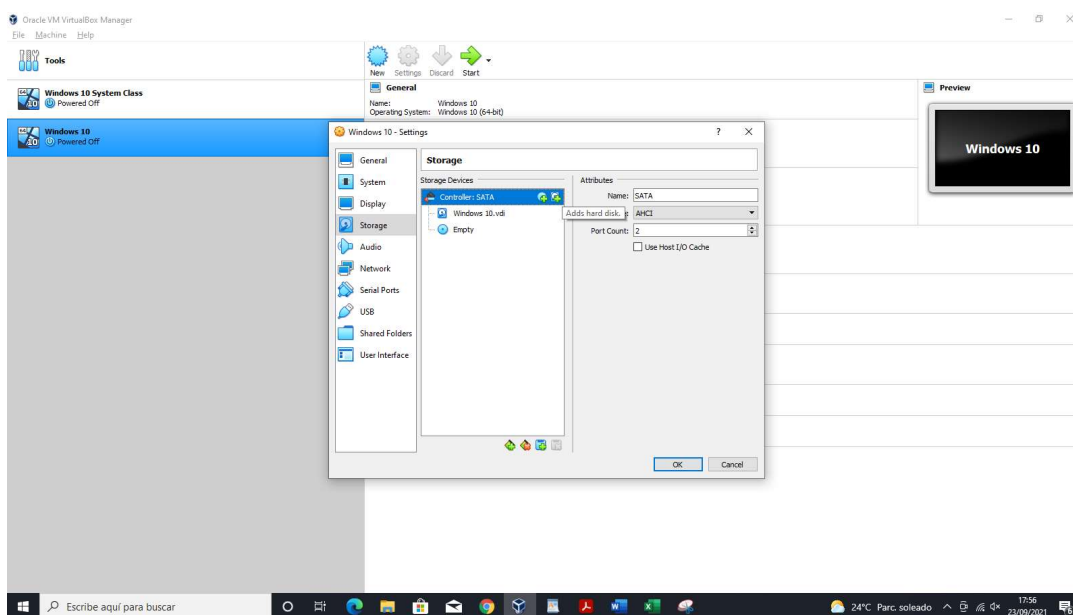

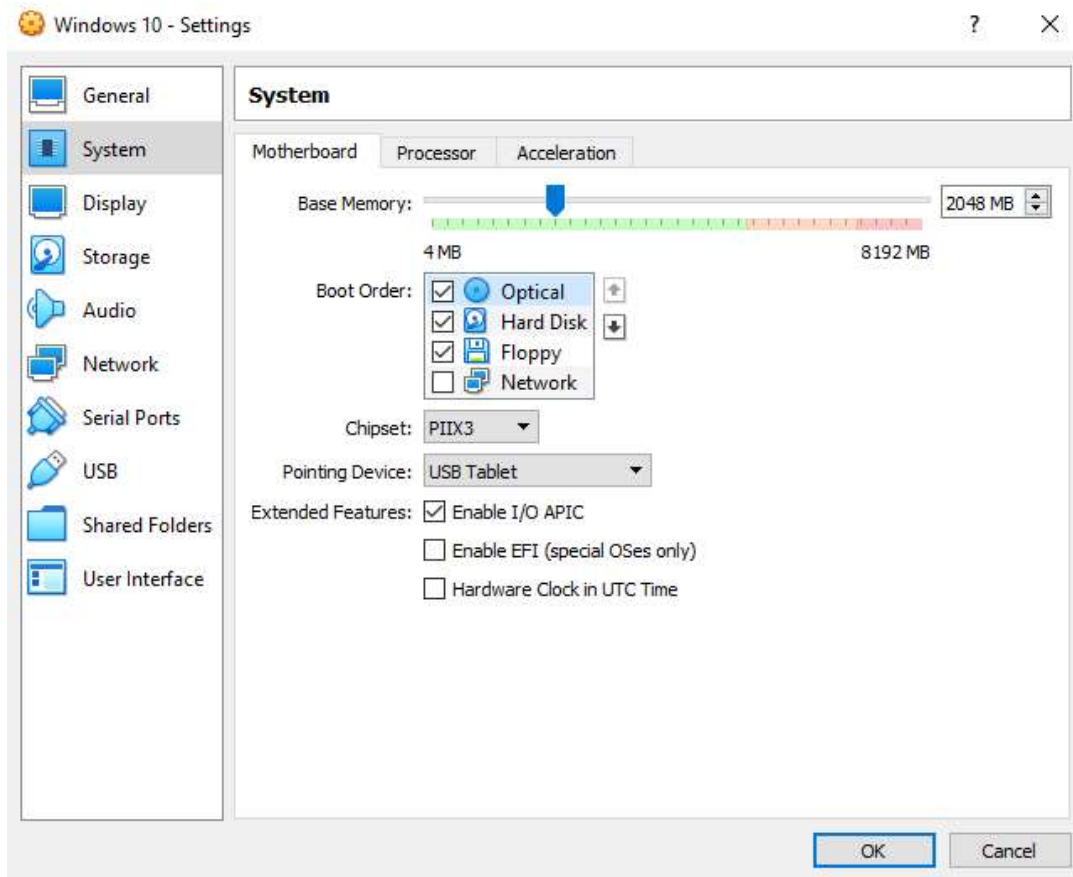

C:\Users\Vespertino\VirtualBox VMs\Windows 10\Windows 10.vdi

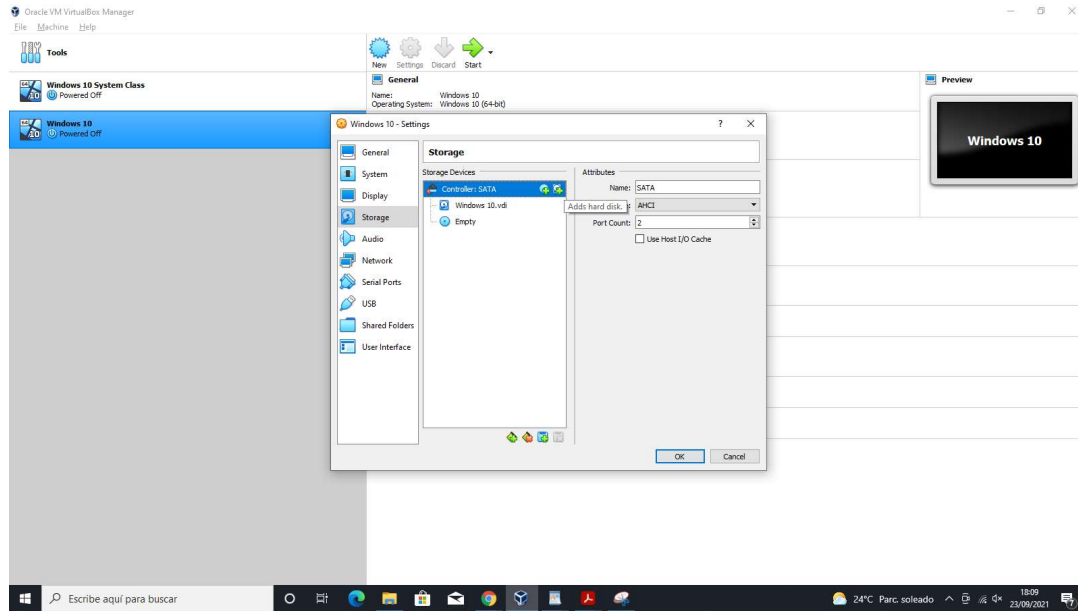

Select the size of the virtual hard disk in megabytes. This size is the limit on the amount of file data that a virtual machine will be able to store on the hard disk.

once we created the virtual machines

Hard disk file type

Please choose the type of file that you would like to use for the new virtual hard disk. If you do not need to use it with other virtualization software you can leave this setting unchanged.

- ☒ VDI (VirtualBox Disk Image)
- ☐ VHD (Virtual Hard Disk)
- ☐ VMDK (Virtual Machine Disk)

← Create Virtual Hard Disk

File location and size

Please type the name of the new virtual hard disk file into the box below or click on the folder icon to select a different folder to create the file in.

C:\Users\Vespertino\VirtualBox VMs\Windows 10\Windows 10_1.vdi 

Select the size of the virtual hard disk in megabytes. This size is the limit on the amount of file data that a virtual machine will be able to store on the hard disk.

EXERCISE 2:

For the USB 3.0, you first need to install an extension from “File -> Preferences” in the VirtualBox main menu

For the clipboard bidirectional:

- General
- System
- Display
- Storage
- Audio
- Network
- Serial Ports
- USB
- Shared Folders
- User Interface

General

Basic Advanced Description Disk Encryption

Snapshot Folder: C:\Users\azada\VirtualBox VMs\Windows 10\Snapshots

Shared Clipboard: Bidirectional

Drag'n'Drop: Bidirectional
